

**Incombustible Microlite®**  
*Fiber Glass Thermal and Acoustical Blanket*

**Description**

Incombustible Microlite insulation is specifically developed as a thermal and acoustical blanket for use in marine applications. Produced from fine glass fibers and bonded with a thermo-setting resin, it is lightweight, highly resilient and has nonsettling characteristics.

**Advantages**

**High Thermal Performance.** The extremely low conductivity of Incombustible Microlite assures optimum operating efficiency of shipboard heating and air conditioning systems.

**Fire Safety.** Incombustible Microlite is Coast Guard/IMO Approved 164.109/38/0 as an incombustible material. It also meets the requirements of NFPA 90A and 90B Standards, and has an FHC flame spread of less than 25 and a smoke developed rating of less than 50 per ASTM E 84.

**Noise Control.** Incombustible Microlite has excellent sound absorption characteristics to reduce the level of unwanted noise.

**Faster Installation.** Incombustible Microlite is easily cut and installs with a minimum of effort.

**Superior Performance.** Properly installed Incombustible Microlite will remain unaffected by age and temperature change.

**Government Certification**

When ordering material to comply with any government, ASTM or listed specification, a statement of that fact must appear on the purchase order. Government regulations and other listed specifications require specific lot testing and prohibit certification of compliance after shipment has been made. There may be additional charges associated with specification compliance testing.
